Problem

Fill the polygon $ABCDE$ using the scanline algorithm, where

$$A = \begin{pmatrix} 1 \\ 3 \end{pmatrix}, \quad B = \begin{pmatrix} 2 \\ 0 \end{pmatrix}, \quad C = \begin{pmatrix} 7 \\ 2 \end{pmatrix}, \quad D = \begin{pmatrix} 4 \\ 2 \end{pmatrix}, \quad E = \begin{pmatrix} 5 \\ 5 \end{pmatrix}.$$

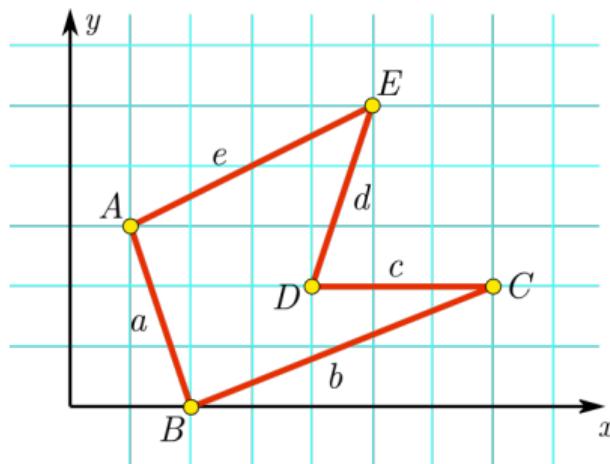

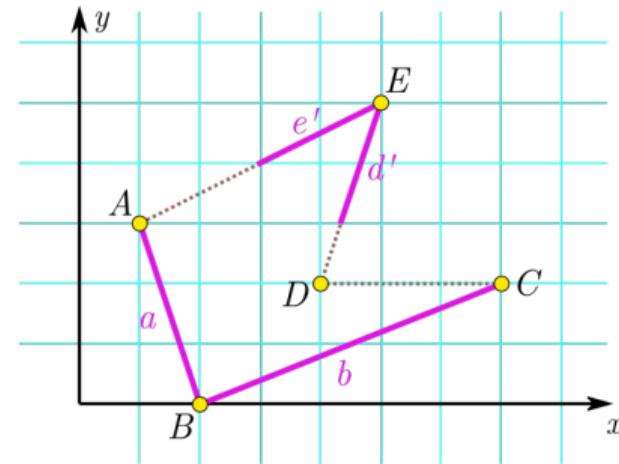

Table of edges (TE)

y	edges
0	a [3 2 $^{-1}/_3$] b [2 2 $^{5}/_2$]
1	\emptyset
2	\emptyset
3	d' [5 $^{13}/_3$ $^{1}/_3$]
4	e' [5 3 2]
5	\emptyset

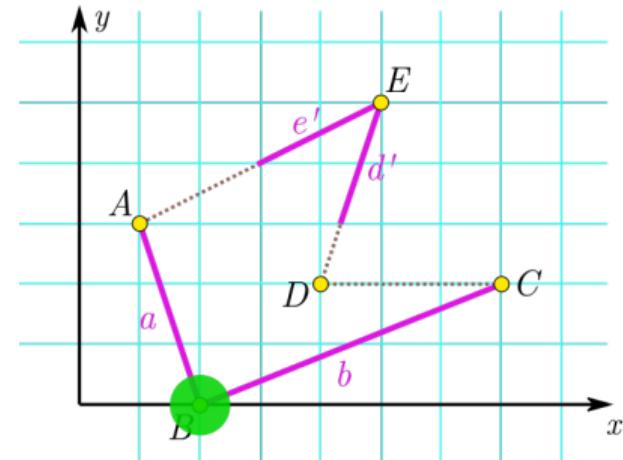

- the edge c is erased, because it is parallel with the direction of scanning,
- edges d and e are shortened to edges d' and e' , respectively, because they contain a non-extremal vertex and lie in the upper halfplane with respect to the line passing through the vertex
